CAPABILITY STATEMENT

CyMyCloud

A compliant cloud platform for the defense supply chain

The Department of Defense now requires its suppliers to meet CMMC, and most small contractors handle Controlled Unclassified Information (CUI) on everyday laptops and email. CyMyCloud is a managed, secure cloud platform that solves this two ways: contractor teams do their CUI work in a browser-based workspace, and software companies host their own applications on the same compliant infrastructure. Either way, the data and the controls live on infrastructure we run and secure, so endpoints stay low-risk and out of most of the compliance scope.

200,000+
companies in scope for CMMC

~80,000
expected to need CMMC Level 2

SLSA 2
signed, in-house software supply chain

TWO WAYS TO USE IT

- **Secure workspace.** Files, chat, calendar, office, and email in the browser; CUI stays in the cloud and endpoints stay light-scope
- **Application hosting.** Run your own IaaS, PaaS, or SaaS on our compliant infrastructure, from internal line-of-business tools to public-facing platforms, without standing up your own compliance program
- Customers inherit the CMMC Level 2 controls; posture reported through RegScale and Paramify

WHY IT WINS

- **Web, not VDI.** Nothing heavy to install; endpoints stay light-scope
- **Sovereign stack.** Our own platform, with no hyperscaler lock-in
- **Small-business budgets**, well under streamed-desktop and hyperscaler enclave costs

ENGINEERED IN-HOUSE

- **CyMyForge.** Our in-production secure software factory: every image is vulnerability-scanned, SBOM-tracked, and cryptographically signed to SLSA Level 2, a supply chain few small businesses can match
- **The Arc.** A FIPS-hardened, repeatably built root-of-trust host that seeds and anchors the entire build chain
- **CyMyMimir.** A sovereign, in-enclave AI layer for log analysis that keeps security telemetry inside the boundary rather than shipping it to third-party AI services

BACKED BY CYBERMYTE, LLC

- ISO 9001:2015 and ISO 27001:2022 certified
- GSA Multiple Award Schedule (IT and Cloud); MDA SHIELD IDIQ prime
- CMMC Level 2: self-assessment in progress; a C3PAO partner will conduct the certification assessment
- FedRAMP Moderate: preparing for authorization; not yet authorized

UEI **EKZWVH5U5126** CAGE **86V74** GSA MAS **47QTCA22D00AP** GSA SIN **518210C** MDA SHIELD **HQ085926DG422**
NAICS **518210, 541513, 541519**
